Alex,

Please be sure to also include about Hope Basin in your comments. The areas that are considered for time/area closures in the DEIS were based on public comments received during the scoping phase of this project. At that time, Hope Basin was never mentioned, which is why it is not included in the DEIS. However, if you include it in your comments, we would be happy to consider it in our evaluation as we move forward to the final product.

It would be wonderful if you would be able to send us a couple of copies of the book. We would be happy to review the materials in there and reference it as appropriate in the Final EIS.

Thanks,  
Candace

Thanks for the quick response. We are going to support a level 1 with required closures from alternative 4.

Surprisingly there is another area we did not discuss in enough detail and that is regarding the Hope Basin, while it is included in the EIS area, the discussion (and exclusion/timing areas) mainly focuses on the general area of 193 sales. However if it is likely that seismic activity will occur in the Hope basin (which is included in the EIS area after all) then our comments would be tailored to add exclusion areas in and adjacent to Kotzebue Sound. Northern Kotzebue Sound is extremely important to our members for seal and beluga hunting, as such exploration activity would have great potential to impact this if not done with proper timing and geographical restrictions. I forgot to give you a copy of our recent book "**Combining Inupiaq and Scientific Knowledge: Ecology in Northern Kotzebue Sound, Alaska**", discussing this area, which by the way should be referenced in the final EIS bibliography - it can be found at:

<http://seagrant.uaf.edu/bookstore/pubs/SG-ED-72.html>

It would be nice if you could order a copy or two to support the effort, but I would be willing to send either one of you, or the reviewers in NOAA a copy or two for developing the final EIS if needed, just let me know.

I imagine Kivalina and Point Hope would want exclusion areas also. It is easy to forget or not notice the inclusion of the Hope Basin including the nearshore areas, since again the majority of the discussion is focused up north and of course that is where all the money is invested and Hope Basin has not proven the same level of potential as say the burger prospect from previous exploration. Anyways this could all be suggested for inclusion in the final EIS so some feedback would be appreciated.

Thanks,

Alex
